Continuation of 11. does NOT place the application in condition for allowance because: Applicant's representative argued that Itzel fails to teach a concertina construction. However, applicant's specification does not define a concertina construction and also lacks criticality. Merriam Webster defines "concertina" as both a musical instrument in the accordion family and a coiled barbed wire. With respect to the concertina construction, taking into account what applicant's specification provides and the definition of the word, Itzel can be read as disclosing a concertina construction in figs 2a, 4a, 5b. Applicant's representative further argued that the combination of Boyd and Itzel fails to teach a flexible material. However, Boyd discloses "flexible polymer containers," "expansion changes the internal volume of the container enough to minimize internal gas pressure," and discloses materials such as "lightweight polymer or plastic materials" that are well known in the art to be flexible on col. 2, II. 3-46, and therefore teaches a flexible material.
